

To meet your various needs for performance assistance, HP has developed an integrated set of consulting services.

For ongoing management of your system's performance, HPTREND is ideal. To help you understand or anticipate performance problems or degradation, HPSNAPSHOT can help. To plan for system growth while maintaining optimum performance, HPCAPLAN is your answer. And for unique performance situations that require unique HP solutions, Custom Performance Consulting is your best buy.

As your business grows, your computing needs change too often such changes catch companies by surprise.

Eliminating surprises by helping you understand your current system operation and anticipating future needs is the job of Hewlett-Packard's Performance Consulting services.

Now, Hewlett-Packard can help you get solid answers to important questions like these:

What happens when my number of users increases?

How can I spot system bottlenecks before they become serious problems?

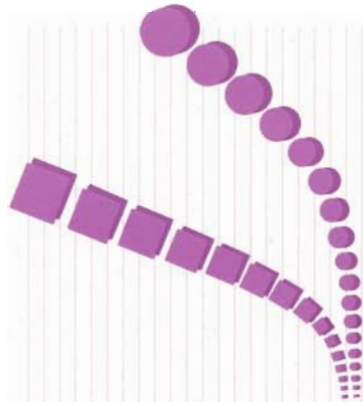

Can I make better use of load balancing across different HP 3000s?

Can I add 15 more terminals doing MM/3000 and still maintain my current fast response time?

Am I CPU bound, Memory bound, or IO bound?

How can I tell when best to expand my system's capabilities?

HP's Performance Consulting services provide the tools and expertise you need to fine tune your system for improved performance, and to plan effectively for future growth.

HP TREND

High Level Resource Planning and Load Balancing Over Time

HPTREND System Performance Analysis provides you with periodic reports you can use in the ongoing, high level management of overall system resources. You get the information you need to perform resource planning and load balancing across multiple HP 3000s, shifts, and days in the month.

HP TREND uses sophisticated proprietary software to generate a graphic overview of important system performance indicators such as CPU usage, memory and disc I/O activity. Your productivity is increased because you don't have to compile the data — you simply use it to better plan for efficient operations.

Designed for your ease of use, HP TREND does not require any of your own resources. You just initiate the HP TREND data collection process with your HP Response Center, and HP TREND does the rest.

Best of all, HP TREND is a new feature of Hewlett-Packard's Software Support Services. HP TREND reports are free to Account Management Support customers, and available to Response Center Support customers for a fee.

HP SNAPSHOT

Fine Tune Your HP 3000 for Maximum Performance

With HP SNAPSHOT you receive an in-depth analysis of your HP 3000 system performance, together with HP's specific tuning recommendations for achieving improved performance with your individual application mix.

A highly trained HP Specialist uses advanced software tools to analyze your system's performance, and to develop a set of formal, written recommendations for better system use.

By combining the expertise of an HP Specialist with state-of-the-art performance measurement software, HP SNAPSHOT identifies system bottlenecks and advises operational changes to help you achieve maximum system performance.

What if...

HP CAPLAN

Plan for System Expansion

To meet your growing computing needs, HPCAPLAN System Capacity Planning helps you accurately forecast system expansion.

HPCAPLAN combines the expertise of an HP Specialist with sophisticated capacity planning models to forecast your future operating conditions. By using a variety of "what if" scenarios, you can evaluate alternatives and arrive at the best plan for productive system growth.

Now you can eliminate surprises by knowing just how far you can expand your existing system, and when you will need additional system capacity. With its ability to forecast performance under a variety of conditions, HPCAPLAN is the premier capacity planning service in the industry.

Sometimes, you may require planning and performance assistance beyond the scope of HPTREND, HPSNAPSHOT or HPCAPLAN. For just such situations, HP offers Custom Performance Consulting service.

An HP Specialist will work with you to define your performance consulting needs, collect and interpret data, and come to conclusions on how to best improve your system performance.

All of this is offered in a default package completely tailored to your individual requirements.

SEE YOUR HP SALES REPRESENTATIVE TODAY

Avoid surprises. Don't wait until you are faced with performance problems on your current system. Use HP 3000 Performance Consulting Services to help you better plan and manage your data processing environment.

For information on how to order HP 3000 Performance Consulting Services, contact your local HP sales representative. They are always pleased to help you avoid surprises.
