HP 3000 Series 39

Hewlett-Packard brings big computer features to the small computer user at an affordably low price

The HP 3000 Series 39 is a powerful, yet surprisingly affordable, entry-level system in the HP 3000 family of interactive business systems. It can offer you the full functionality of HP 3000 computer systems—concurrent transaction processing, word processing, batch processing, data management, data communications, and on-line program development—at a very low price. And as all HP 3000s use the same operating system, the Series 39 provides a compatible growth path to larger HP 3000 systems.

The compact, specially designed Series 39 includes a processor which offers the performance of our powerful midrange HP 3000 system, along with your choice of a 27 Mb, 64 Mb, or 132 Mb disc drive. The Series 39 package also includes an easy-to-use, economical tape cartridge back-up system. Combined with HP's smallest office display terminals, the Series 39 becomes a system that everyone on your staff can operate. Its size and ease of operation make it suitable for your business environment. And its low price lets you automate even your smallest office and plant.

The Series 39 incorporates many ease-of-use features which eliminate the need for skilled operators. Anyone on your staff can use the integrated tape cartridge system to back up data and programs. In an office environment, a friendly, menu-driven interface enables even the casual user to access a variety of applications. Your staff can quickly and conveniently input information, such as sales orders and inventory changes, by using the forms data entry capability. The HP 3000 data management capability simplifies data inquiry and report generation in your office or factory by efficiently organizing information. And application packages like word processing and business graphics let you productively and effectively communicate information. All of these menu-driven capabilities can be used without writing a single program. But if you do choose to write your own programs, our HP 3000 productivity tools help you complete entire applications in a fraction of the time.

A cost-effective solution for providing computing needs at a number of different locations, the Series 39 can handle multiple local and remote users—all running different applications at the same time. And it can communicate interactively and in batch mode with other computers in a distributed network.

Designed for growing companies, the Series 39 has the power to expand as your needs for information grow. And HP 3000 software compatibility preserves your programming investment as you upgrade your system or expand to a network.

■ System Specifications

HARDWARE

- 256 Kb to 2 Mb main memory
- Support for 27, 64, 132, and 404 Mb disc drives
- Up to 56 point-to-point and multipoint terminals
- Support for 400, 600, and 1000 lpm system line printers. Also support for Laser Printing System and 180 cps dot-matrix and 40 cps daisy-wheel printers
- Support for cartridge tape drive and 1600 and 6250/1600 bpi magnetic tape drives. (A magnetic tape drive must be used for system with more than 132 Mb disc storage)
- Up to 3 synchronous communication lines for system-to-system or multipoint terminal communications

SOFTWARE

- Multiprogramming Executive Operating System
- Data Base Management System
- Office Systems Software
- Programmer Productivity Tools
- Manufacturing Application Software
- Financial Applications Software
- Software for Distributors
- Distributed Systems Network Software
- Performance Measurement Tool
- High-Level Languages
- Utilities
