SONY's RISC workstation, NEWS.

Dip switch

Dip switch settings. It's completely different from the NWS-5000.

NWS-3470D contents

About usage memory.

NWS-3470D interface

About back connectors etc.

For now:

- OFF SW1,2 to be a serial console
- If it doesn't start with the NVRAM battery out, "Power it on, press the power button and press the reset switch, then release the reset switch first and release the power button."
- Can't boot from CD-ROM?
- ROM monitor has revarp command so it seems like you can do a net boot
