

Tadpole-RDI is proud to offer a full line of
portable UNIX systems and LCD monitors:

VoyagerIII mobile computer system, launched by Tadpole in June 1988, represents a quantum leap in mobile Sun computing. Powered by a 300 MHz UltraSPARC III processor, the VoyagerIII offers up to 1 GB memory, 20 GB removable disk capacity and extensive I/O connectivity features.

Tadpole-RDI's **UltraBook™** delivers true desktop power from a 200 MHz or 167 MHz UltraSPARC processor. It uses the same chip set Sun uses for 100% compatibility with Solaris applications and performance without compromise.

Tadpole-RDI's **PrecisionBook™** is the first PA-RISC laptop, the notebook equivalent of Hewlett-Packard's VISUALIZE B-Class workstation. PrecisionBook utilizes HP's PA-7300LC processor and offers 100% compatibility with HP-UX 10.20 for full desktop performance and capability.

Tadpole-RDI also offers a full line of commercial and rugged flat panel monitors. These panel products offer the most advanced high-resolution technology available and range from a 15" diagonal XGA monitor up to a 20" SXGA monitor. Call for specifications.

Fax Back Form – Please Fax to 760-931-5185

Yes! I am interested in more information about Tadpole-RDI's products. Please send me information on:

☐ VoyagerIII

☐ UltraBook

☐ PrecisionBook

☐ LCD Monitor

☐ Please have a sales representative call me.
