

DR MultiUser DOS Upgrade sheet.

PLEASE READ ALL INSTRUCTIONS FIRST!!

Please follow these instructions to upgrade your DR multiuser DOS. These instructions will lead you through each required keystroke and  , please follow each keystroke and do not get ahead or you could destroy your drdos setup and require a service call.

Some of the commands will cause a delay while your computer does some work. Please be patient.

PLEASE READ ALL INSTRUCTIONS FIRST!!

Make sure your capslock is on before you start.

You should have three disks. Two of them should have "DR Multiuser DOS 5.11" on them, 1 of 2 and 2 of 2. The third disk should have "config.cpl" on it. Please put the third disk away for the moment.

If you have any trouble, please call Financial Software Systems at (405) 794-4900.

PLEASE READ ALL INSTRUCTIONS FIRST!!

Get out the two disks that are your DR multiuser DOS upgrade. On disk one there should be a serial number, the number would be in this format, for example: A2015-1544-900100. You will need this number later.

Record that number here: A2015-1544-005988

1. You need to be at a DOS prompt. If you are not at a DOS prompt already, use either  to exit out of the system menu, or  to exit out of the loan program from the main menu.

2. Make sure you are in Multi mode when you start this process. You can do this by typing:

VER 

and making sure that the first of the lines that appear reads "Novell DR Multiuser DOS"

IF you are NOT in Multi, go ahead and type:

MULTI 

At this time to reboot your computer into multi, and then continue back at step one.

3. You need to be at the C:\> prompt. You may be there already when you go to a prompt, but to get there for certain, type:

C: 

CD\ 

4. Type:

COPY CCONFIG.SYS CCONFIG.FSS 

COPY DRMDOS.INP FSS.INP 

5: Insert Disk 1 of the 2 DrDos disks into the floppy drive of your computer.

6: Type:

A: INSTALL 

7: After waiting a bit press  to get past the first screen.

8: Use the  arrow key to select "install default system" and press .

9: Type the name of your company and press .

10: This is the number you recorded off of disk 1 and put on the top of the first page, it is important to put in the dashes when you enter in the number into the computer.

Type the serial number off of the disks and press .

11: Press  to leave this page.

12: Press the  arrow key to put your cursor in the box. Use the  key several times to delete what is in the box and replace it with:

C:\DRDOS

After you have done that press .

13: Press .

14: You should now be at the "secure system installation" page. Press  to continue past this page.

15: Leave "no" selected and press .

16: Press  on this next screen and the disk should begin to copy at this point.

This will take a few moments, please be patient.

17: When disk 1 is done, and says it is waiting for disk 2, take out disk 1, put in disk 2 of the DRDos disks and press .

18: On the screen that appears after disk 2 is done copying, use the  arrow key to select "continue to next screen" and press .

19: Take out disk 2 and put disk 1 back in.

20: Use the  arrow key to select "exit to operating system," and press .

21: Take out any disk from the floppy drive and type:

SETUP /I DRMDOS.SYS FSS.INP 

COPY CCONFIG.FSS CCONFIG.SYS 

22: Put in the third disk into the floppy drive now, the one that reads: "config.cpl" and type:

A:CINSTALL 

23: Take out that disk from the floppy drive and type:

MULTI 

24: Your computer should now be re-booting. When it comes back on, you are all done!
