HP secure development lifecycle

Starting with HP-UX 11i v3 March 2013 update release, HP secure development lifecycle provides the ability to authenticate HP-UX software. Software delivered through this release has been digitally signed using HP's private key. You can now verify the authenticity of the software before installing the products, delivered through this release.

To verify the software signatures in signed depot, the following products must be installed on your system:

- B.11.31.1303 or later version of SD (Software Distributor)
- A.01.01.07 or later version of HP-UX Whitelisting (WhiteListInf)

To verify the signatures, run: `/usr/sbin/swsign -v -s <depot_path>`

For more information, see *Software Distributor documentation* at: <http://www.hp.com/go/sd-docs>.

NOTE: Ignite-UX software delivered with HP-UX 11i v3 March 2014 release or later supports verification of the software signatures in signed depot or media, during cold installation. For more information, see *Ignite-UX documentation* at: <http://www.hp.com/go/ignite-ux-docs>.

New OE	Description
Base OE (BOE)	Provides integrated HP-UX functionality for customers requiring less complex installations. The BOE contains all the applications included in the Foundation OE, and improves the bundle set by adding much-requested products such as HP Process Resource Manager (PRM) and APA. This OE is bundled as <code>HPUX11i-BOE</code> .
Virtual Server OE (VSE-OE)	Designed for customers seeking higher resource utilization or embarking on consolidation projects, and those who need virtualization for a flexible UNIX environment. The VSE-OE contains all the products included in the BOE (and the original EOE) and adds a host of other products, including HP Matrix Operating Environment for HP-UX (formerly HP Insight Dynamics – VSE for Integrity). The VSE-OE is bundled as <code>HPUX11i-VSE-OE</code> .
High Availability OE (HA-OE)	For customers requiring high availability for large mission-critical applications, this OE contains all the products included in the BOE (and the original EOE), plus applications such as HP Serviceguard, SGeRAC,

New OE	Description
Data Center OE (DC-OE)	and HA toolkits required to enable a mission-critical server. This OE is bundled as HP-UX11i-HA-OE. For customers who need both flexibility and high availability, the Data Center OE provides mission-critical virtualization by combining the robust product selection in the VSE-OE and HA-OE in one integrated and tested bundle. This OE contains all the products included in the BOE, VSE-OE, HA-OE (and the original MCOE) and is bundled as HP-UX11i-DC-OE.

Firmware requirements

Make sure your system meets the minimum firmware requirements for HP-UX 11i v3 (B.11.31). New IO adapters and certain virtualization applications may require updated firmware. Check the product documentation for further information.

For information about finding firmware, see *HP-UX 11i v3 Installation and Update Guide* at <http://www.hp.com/go/hpux-core-docs-11iv3>.

Procedures for installing VxFS and VxVM are new

Starting with September 2009 Operating Environment Update Release (OEUR), the installation of VxFS and VxVM have changed. The HP-UX 11i v3 OEUR included the 4.1 and 5.0 versions of VxFS. The *recommended* (default-installed) selection was VxFS 5.0 plus LVM. In September 2011 OEUR, the *recommended* (default-installed) selection for all systems was VxFS 5.0.1 plus LVM.

As of March 2012 OEUR, VxFS 5.0.1 is *required* (always-installed) and LVM is *recommended* (default-installed). This has important implications for several install scenarios. For information on how this may impact you, see Appendix B: “Installing VxFS, OnlineJFS, LVM, and VxVM” of *HP-UX 11i v3 Installation and Update Guide, March 2014* or later (<http://www.hp.com/go/hpux-core-docs-11iv3>).

Starting with March 2014 OEUR, VxFS 4.1, VxFS 5.1 SP1, and VxVM 5.1 SP1 are included in the OEUR and AR media. However, VxFS 5.1 SP1 is *required* (always-installed) product. This means that you can no longer deselect VxFS 5.1 SP1 (Base-VxFS-51) in the Ignite-UX tool. Base-VxVM-51 is shipped as (optional) product and you must explicitly select in Ignite-UX tool for installation.

VxFS 5.0.1 and VxVM 5.0.1 are no longer shipped in the OEUR and AR media. They are available as independent download.

Harmless messages and known problems
