

AnyConnect CWS Root Certificate Replacement

This document contains instructions on how to deploy a new CWS root certificate into the Cisco AnyConnect Web Security Module.

For verification purposes, the hashes of the updated WebSecurityCert.cfg file are as follows:

- MD5: 2614153a5a2617eaf2ad3e0544ce3621
- SHA256: d4987131279f2787f53588fcfc294f805bea01b3202d5b6d805dc7c608d8afcb

Deploy the Certificate on Windows

Extract the WebSecurityCert.cfg file from the .zip file and copy it to the *%PROGRAMDATA%\Cisco\Cisco AnyConnect Secure Mobility Client\Web Security* directory and reboot.

Note

You must have administrator privileges to replace the file.

Deploy the Certificate on Mac

Extract the WebSecurityCert.cfg file from the .zip file and copy it to the */opt/anyconnect/websecurity* directory and reboot.

Note

You must have root privileges to replace the file.
